

Kahua Scheduling (rSchedule)

Track. Analyze. Collaborate.

Frequent changes in construction plans make schedule management complex, often leading to misaligned priorities, wasted time, and costly delays. Without a centralized, real-time source of truth, communication gaps and errors can disrupt workflows, drive up costs, and reduce overall project efficiency.

Single Source for all Project Timelines

Seamless Integration for MS Project and P6

Proactive Risk Management

Link Assets to Schedules

Align Internal & External Teams

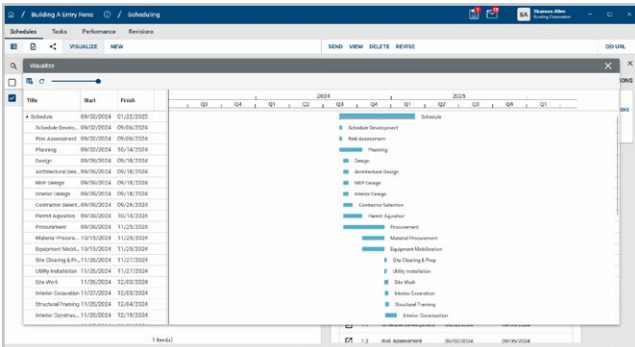

Stay Ahead of Scheduling Conflicts

Supercharge Your Project Schedule Data

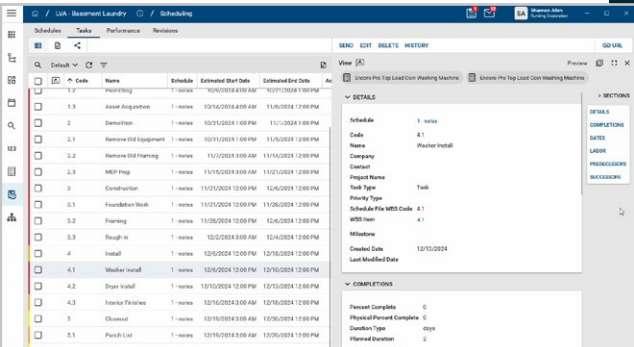

Kahua’s rSchedule enhances project success by centralizing scheduling data in Kahua, providing real-time visibility and control. Easily import Microsoft Project and Primavera P6 files to streamline tracking, collaboration, and risk management. With visibility into both internal and subcontractor schedules, proactively manage timelines, mitigate risks, and ensure projects stay on-schedule and on-budget with confidence.

Learn how Kahua transforms project scheduling with efficient, real-time tracking and centralized data, streamlining workflows, boosting collaboration and ensuring on-time, high-quality results.
