

A Connected Platform to Power Water and Wastewater Projects

Powering Every Project Empowering Every Team

When utility organizations are thinking about updating their construction project management information systems (PMIS), that often means replacing a 15- or 20-year-old process. Many utilities still rely on spreadsheets, email and home-grown systems, which can't scale or evolve as projects get more complex. In this environment, there is no "single source of truth": It exists in 15 or 20 different places and adds a lot of administrative work.

This is especially true for organizations that manage diverse funding sources, comply with broad regulatory requirements and maintain transparency across boards, ratepayers and community stakeholders.

[Kahua](#) delivers a single, connected platform for water and wastewater organizations to manage capital programs of every size. From small plant upgrades to multi-phase, billion-dollar treatment and infrastructure initiatives, Kahua unites the entire ecosystem, including owners, contractors, consultants and cross-department teams, in one secure, collaborative solution.

Whether you're a small capital projects team or a large regional utility, Kahua adapts to the way you work, across every project.

Efficiency and Collaboration From Small Teams to Mega Projects

[Kahua for Water & Wastewater](#) is purpose-built to meet the unique demands of utility capital programs. Unlike generic project management tools, Kahua is designed to support the full spectrum of water and wastewater projects, from small pump station or pipeline upgrades to complex treatment plant expansions and multi-program infrastructure initiatives.

With configurable workflows, secure FedRAMP-authorized architecture and powerful portfolio management capabilities, Kahua helps utilities deliver projects more efficiently, collaborate across departments and stakeholders and ensure every investment creates lasting value for the communities they serve.

Water and Wastewater Organizations **Trust Kahua**

Portfolio & Project Flexibility

Manage a wide range of programs with Kahua's hierarchy structure; run small renovations and mega-projects the way they need to be run, while rolling everything up into a single portfolio view.

Funding Management

Track and report on multiple funding sources with confidence, ensuring compliance and transparency across every project, including federal and state grants, revolving loan funds and bond-supported programs.

Collaboration & Compliance

Streamline collaboration across teams, utilities, contractors and stakeholders while maintaining audit-ready compliance with regulatory and funding requirements.

Secure & Trusted

Built on a FedRAMP-authorized foundation with strict GovRAMP controls, Kahua keeps sensitive utility and infrastructure data safe while supporting complex security needs.

Total Visibility

Bring all project data into one place for real-time visibility into costs, schedules and risks. Make decisions more accurate at every turn, while reducing administrative overhead.

Asset-Centric Project Management® (ACPM)

Capture complete, accurate asset data during construction to ensure seamless handover and day-one operational readiness for treatment facilities, pump stations, pipelines and more.

Water and Wastewater Leaders **Choose Kahua**
