What Our Customers Are Saying

How Kahua Analytics is Driving Growth and Efficiency

“When we signed up to build out Floor & Decor’s analytics, we expected to get insights into a few important, focused areas about our construction timelines and financials. What we didn’t expect is how Kahua Analytics was able to reveal to us just how many other areas can suddenly be visualized and tracked in depth to accomplish that goal.

I’ve personally worked with the Kahua Analytics team to build out inward-facing dashboards to determine time-to-completion metrics for individual steps in our workflows for approvals, which address delays, expedite project timelines and keep the wheels greased and turning smoothly.”

– Austin Buege, Senior Manager – Real Estate Consolidated Systems, Floor & Decor

“With Kahua Analytics, we can track allocated funds, spending, and future forecasts - all in one place. It’s essential for managing our large-scale capital projects. As we launch new initiatives, the ability to forecast cash flow one to three years in advance gives us the precision and confidence we need to plan effectively and stay on track.”

– Albert Franco, Sr. Lead Facilities Technology, Rivian

“Our first goal is getting information out to the public, making sure that we can see all the schools and what’s going on with those schools.

That is important because you’re dealing with taxpayers’ dollars, so transparency is key. Kahua Analytics allows us to do that. This is just as important when you are going out for another bond, you have to be transparent and show them how their dollars are being spent.

Before Kahua Analytics reports like this would take weeks to compile and by the time they were presented, the data was outdated. I can now pull this data in dynamic dashboards with a simple key stroke”

– Cherie Chenoweth, (former) Coordinator Facilities Business & Compliance, San Juan Unified School District
