

Byrne Software Technologies Migrates Massive Project Data with Kahua

BYRNE Software Technologies, Inc.

Byrne Software Technologies offers IT consulting, software design and programming from concept to delivery based on the goals of its clients, who range from small, privately-held businesses to Fortune 500 companies.

Since 2018, Byrne has partnered with Kahua to grow its professional services offerings with facility owners and construction companies. The agile [construction project management information solution](#) (PMIS) conforms to customers' needs, allowing them to modify the platform to their specific business processes.

The Challenge

When CBRE – the real estate investment company that was overseeing Bank of America's (BoFA) slate of construction projects – selected Kahua, there was a need to migrate data from 2,000+ builds. The project data was stored in its former legacy system, and all data needed to be catalogued, organized and migrated into a program level [hierarchical structure](#) within Kahua.

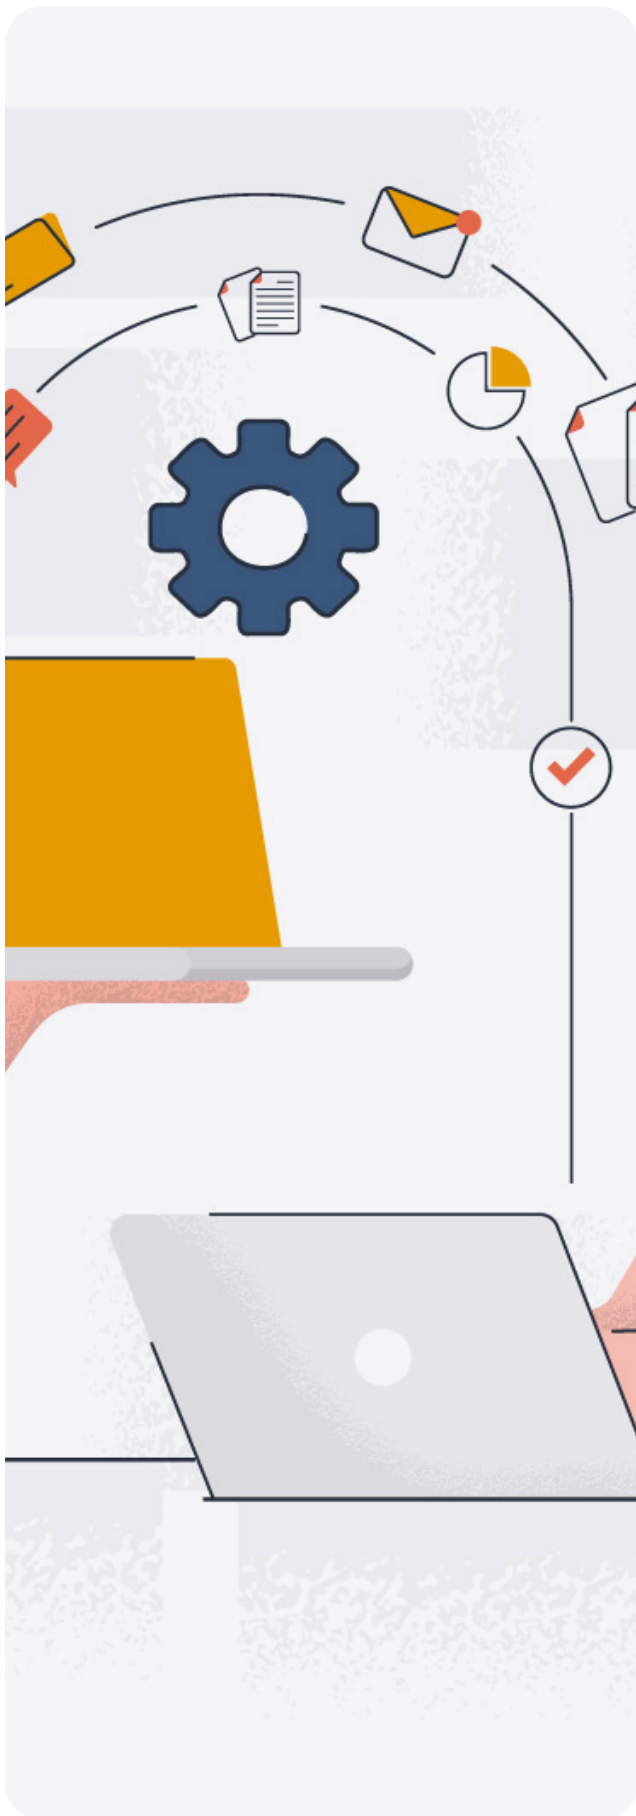

Byrne was brought in to work with BoFA's program manager to support this effort over a 60-day period of performance.

The Solution

Utilizing Kahua's modern API, Byrne was able to easily perform the migration, which allowed the BoFA team to complete the delivery and reduce the economic impact on the implementation. The time required to manually upload documents into Kahua was not manageable, from a cost and time perspective. Byrne provided a service that allowed for the import of large amounts of documents into quantifiable amount of time and scope.

The team successfully migrated all documentation into an enterprise program hierarchy within Kahua's File Manager, where all documents are now logically indexed. This provides simple navigation and visibility into the overall BoFA capital projects portfolio.

The BoFA team now has a solution that reduces the effort required to locate relevant project documentation across the portfolio, which significantly reduces risk by having better governance surrounding project documentation. There are now 300 Kahua users working to sustain and grow real estate projects across the globe.

"I'm proud of our team's collaborative efforts with CBRE to deliver a successful migration. Leveraging our industry expertise and Kahua's ease of use, we were able to quickly implement a scalable solution that enables CBRE to access all their critical project documents in an organized fashion."

Jason O'Bryan | Chief Technology Officer with Byrne

The Kahua platform provides the ability to maintain, update and grow with the client's needs and ever-changing market trends. There's no concern that the client will outgrow the PMIS because the application structure allows BofA to mitigate trends and growth with Kahua platform and apps.

"Both Kahua and the Bank of America benefited from the excellent professional services offered by Byrne Software Technologies. By efficiently migrating the data for more than 2,000 construction projects, we were able to complete the task within the customer's required timeframe and budget."

Joe Guzman | Kahua Vice President of Partner Development

Choose Kahua

Kahua is a leading provider of capital program and construction project management software, enabling innovation that is changing the way that capital programs are planned and delivered. Global organizations use Kahua's collaborative solution to improve efficiency, lower costs and reduce project risk throughout the entire lifecycle of their capital programs. Our purpose-built solutions for owners, program managers and contractors enable rapid implementation that minimizes time-to-value and enhances user adoption. With the industry's only low-code application platform, customers can easily customize existing Kahua apps or even build their own new apps to run their business at peak efficiency today and rapidly adapt as business conditions dictate.
