

By Land, Sea & Air: **Kahua Provides** **Construction** **Management for** **Military**

All major construction projects face the pain points of managing budget, schedule, quality and safety. Construction for Department of Defense (DoD) projects, however, have their own set of unique challenges.

There are higher risk levels, ranging from unique requirements to meet the mission and geopolitical instability, creating the need for robust [risk management](#) strategies.

A major area of concern in today's digital environment is cybersecurity. Agencies and project teams now must meet a much higher level of scrutiny, and the need for heightened [security measures](#) can be daunting.

Strict compliance with military regulations and standards adds complexity and risk for agencies and their vendor community.

Because of these concerns, DoD construction requires the most secure, collaborative [project management information system](#) (PMIS) on the market that protects data and enables collaboration, ease of use, efficiencies and reporting to mitigate risk and deliver on budget and on time.

For DoD entities, the standards for PMIS and contract document management systems are FedRAMP and the Cybersecurity Maturity Model Certification (CMMC).

Kahua holds a FedRAMP Moderate Authorization. It has also completed the Authority to Operate (ATO) process with multiple federal agencies, which shortens the individual ATO process for government agencies. In addition to being FedRAMP Authorized, the DoD's use of Kahua's security controls allows DoD IL-2 information to be hosted in the Kahua Government Network.

CMMC is a core element of the DoD's information security requirements for its partners in the defense industrial base. Its purpose is to ensure the safeguarding of sensitive unclassified information shared between the DoD and its contractors and subcontractors. Kahua is currently working toward CMMC 2.0, expected to become required by law in 2024 for federal vendors.

Kahua is providing its project management solution to numerous defense agencies that plan and execute military projects around the world. Whether the construction's mission is to amplify security to thwart foes or to provide disaster relief to friends, Kahua's government-oriented solution is helping coordinate efforts between military branches and contractors while meeting security protocols.

Kahua's [FedRAMP Authorization](#) and CMMC certification are crucial in being chosen by DoD customers. Other Kahua benefits under consideration in the selection include:

- Providing confidence in making critical decisions with its single-source-of-truth data
- Adherence to compliance and regulations across all activities in the program
- Visibility to anticipate savings or losses and improve accuracy of projections
- Streamline change request management with powerful and efficient workflows
- Enhanced adoption of software by team because of intuitive design
- Access to data for migrations and integration, consolidating of solutions, more efficient tech stack
- Built-in advanced reporting and dashboarding creation capabilities to meet their specific needs
- Assurance that implementation and support are delivered by an experienced federal team

Choose Kahua

Kahua is a leading provider of capital program and construction project management software, enabling innovation that is changing the way that capital programs are planned and delivered. Global organizations use Kahua's collaborative solution to improve efficiency, lower costs and reduce project risk throughout the entire lifecycle of their capital programs. Our purpose-built solutions for owners, program managers and contractors enable rapid implementation that minimizes time-to-value and enhances user adoption. With the industry's only low-code application platform, customers can easily customize existing Kahua apps or even build their own new apps to run their business at peak efficiency today and rapidly adapt as business conditions dictate.
